

Securing Shurgard Self Storage, Greenwich

**Jacksons
Fencing**

Products

- 45 metres Barbican® fencing
- 43 metres of EuroGuard® Extra fencing
- 3 single leaf EuroGuard® Flatform gates
- 4 cantilevered Sentry sliding gates
- 1 bi-folding speed gate
- 1 single leaf Barbican® gate
- 3 single leaf Barbican® and mesh clad gates

Background

After the successful completion of Shurgard's Romford branch, Appian Construction were hired to manage the £14 million development of the UK's largest store in Greenwich, a site historically used as a fuel depot, and in recent years a car park. The new store consists of 4 stories, with over 1500 units available for hire and a large underground loading area, all a stone's throw from the O2 Riverside Arena and Greenwich Shopping Park.

With over 12000m² of space, Shurgard provides personal and business storage units ranging from 15-240 sq ft. Popular for their online booking system and no booking fees or deposits, they are the biggest self-storage operator in Europe, providing facilities at more than 200 locations.

Responsible for the safety and security of personal possessions and valuable assets, perimeter security and access control measures were an essential part of the development.

Solution

A testament to the involvement in 8 preceding Shurgard projects, Jacksons Fencing was chosen for the manufacture, supply, and install of fencing and gates for the new development, to provide safety and security for customers and their belongings. Security measures at the site include CCTV cameras, alarms, and sensor lighting, along with perimeter fencing and controlled gate access. The facility is divided into zones, each with its own PIN code, ensuring there is no unauthorised access by outsiders or users of separate zones.

In order to reduce the risk of break-ins and other criminal activity, we installed our Barbican® vertical bar fencing. Its welded pale-through-rail construction means that there are no bolts or palings that could be forced or removed to gain entry. To match the fencing, we supplied 4 single leaf gates, 3 of which were mesh clad to distinguish emergency access points as well as provide additional security. Included in the design was an external waste compacting unit which was enclosed with fencing to reduce the risk of injury to the public and prevent criminal activity.

To ensure there was good visibility for CCTV at the rear of the site, we installed Euroguard® Extra, a welded mesh, anti-climb barrier which prevents the smuggling of prohibited items thanks to its small apertures. An additional 3 matching gates were installed for maintenance use.

Barbican® Fencing
