

## CONCERTINA RAZOR WIRE

Unlike barbed wire used for agricultural purposes, Jacksons' Concertina Razor Wire (Barbed Tape Concertina) adds a visual and physical deterrent against intrusion by climbing, intended for use atop security fencing. Commonly installed in areas where discretion around security is not required, it has been successfully implemented in sites like data centres, utilities, military bases and airfields, and has also been installed on boats to protect against piracy. Due to its galvanised steel construction, it offers superior protection against rust and corrosion.

- Concertina razor wire is firmly clipped together to increase strength, and installed by securely tying to fencing
- Razor blades are 20mm long and are spaced 15mm tip to tip
- Can be installed on most types of fencing
- 54/55 spirals per coil
- 2.45mm core wire diameter
- 0.45mm tape thickness
- Core wire made from high tensile steel, 1400mpa
- Tape made from high tensile steel
- Galvanised Std EN 10223-2
- Standard clips 10mm wide x 2mm thick, clip yield strength approx 1300N

COIL DIAMETER (mm)	RECOMMENDED EXTENDED LENGTH PER COIL (m)	CLIPS PER SPIRAL	WIDTH OF TAPE BEFORE CRIMPING (mm)	OVERALL WIDTH ACROSS PAIR OF BARBS (mm)	WEIGHT PER COIL (kg)
450	8-10	3	19	13	8
710	10-12	5	19	13	10
980	12-15	5	19	15	12

### APPLICATIONS

- Data centres
- Utilities
- Military bases
- Airfields
