Jacksons
Quality that lasts
Fencing & Access Solutions

The Jacksons self closing gate has some key factors that makes it unique and the best on the market

Features

- The gate itself has 2 closing speeds known as the closing speed and latching speed. This therefore allows the gate to close from its open position at one speed and if required will slow down for the final latching as it comes to rest on the slam post
- The gates have been approved by ROSPA to BS 1176
- The mechanism allows the gate to open both ways to a maximum angle of 113°
- The mechanism has been tested for 1,000,000 cycles
- Great for use on children's play areas so that the gate does not injure the child as its closing
- Dog proof

Maintenance

The closing speed and latching speed will be pre-set according to ROSPA guidelines but if fully adjustable. Other maintenance is required on the top hinge of the gate where there is an Oilite bush in which the drop bolt rotates.

Self Closing Gate

Installation

The floor hinge itself comes fully externally rated and has passed some of the most rigid quality assurance tests ever devised.

The floor hinge itself comes installed on the gate frame upon delivery and therefore requires no necessary adjustments. The holes for the posts need to be dug then set in concrete.

The top plate of the floor hinge sits along ground level making it accessible if the closing speed needs to be adjusted.
