

EuroGuard Combi securing BMW car park

Bespoke EuroGuard Combi at BMW Service Centre

Jacksons
Guaranteed Quality since 1947

Key challenge:

The overarching challenge was to establish an enhanced level of security at the premises, with effective, easy to manage access control, but with no compromise to the aesthetics of the site.

On a practical level, other challenges included the supply of Jacksons EuroGuard Combi fencing with the timber inserts stained to match a specific house grey shade. In addition, one of the customized automated EuroGuard Combi sliding gates required special adaptations to suit the site layout.

Products featured:

- EuroGuard Combi - Welded mesh incorporating timber slats

Front view EuroGuard Combi with stainless steel bollard

Project:

Produce a robust perimeter fence that combines the aesthetic appeal of natural timber with the strength and added security of steel.

Solution:

The line of EuroGuard Combi was required as part of the development of a striking newly built service centre. This product is supplied as standard with natural timber slats, which (as per all Jacksons timber) have been Jackured to offer long lasting and highly effective protection against rot and wood boring pests. However, the client required the timber slat inserts to be provided in the house colour grey, which needed to be sourced from Denmark. Traditionally EuroGuard Combi is powder coated mesh in either standard black or green as a complete panel, featuring slats in the natural Jackure finish. However, because of the exacting requirements of this project, the timber slats were first hand stained grey before being secured to the sturdy top and bottom rails to create the unique ultra strong steel / timber fence.
