PRODUCTS

- Anti Trap Bow Top fencing and gates
- EuroGuard® Flatform fencing and gates

CHALLENGE

Jacksons Fencing has supplied and installed perimeter security fencing at Bickley Park School, an independent school in South East London.

The school site consists of a mix of listed buildings and newer contemporary facilities, all set in attractive grounds. The modern structures include a purpose-built nursery, with strong environmental credentials, and a new multi-purpose astro pitch, to complement the existing sports facilities.

Anti Trap Bow Top Fencing

SOLUTION

Jacksons' Anti Trap Bow Top fencing was installed around the nursery site perimeter to provide a visible layer of security that was aesthetically pleasing to the eye and sensitively fitted to lessen the impact on the area's main occupants, as well as to complement the surrounding natural habitat.

EuroGuard® Flatform welded mesh fences and gates were installed to protect the school's new astro pitch. The main requirement here was for a durable and secure solution that would prevent unauthorised entry during out of school hours, as well as protect people, buildings and equipment outside of the perimeter from stray footballs.

Samik Patel, Director of School Development at Bickley Park School, said: "I was very impressed by the level of service Jacksons provided from the start of the project to completion and handover. All of the departments that I dealt with were professional and courteous at all times. The installation team were excellent and worked alongside other contractors to ensure that the project was delivered on time and to a high standard."
